Product Name:	Blue Cap Spray	Sample Received: 125mg
Lot Number:	P-3	Page of 1

Samples of the above mentioned product were supprinted to Guidelines Analytical Laboratories Inc. ("GAL") and screened for the presence of 49 different corticosteroids by an analytical method developed by Dr. John C. Reempmeyer, of the Food and Drug Administration, Regional Laboratory in St. Louis, MO. The method consists of gradient high-pressure liquid chromatography with diode array spectophotometric detection. No corticosteroids were found to be present in the samples submitted when tested by this analytical method.

Guidelines Analytical Laboratoriesting, is an FDA registered, inspected, independent contract laboratory serving the Pharmaceutical Industry. GAL warrants the accuracy of the test results for the samples as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied. GAL disclaims any other warranties, expressed or implied, including a warranty of fitness for particular purposes and warranty of merchantability. GAL accepts no legal responsibility for the purposes for which the client uses the test results.

Attention Anna

Re: Cost estimate to repeat the FDA screening study to measure the presence of steroids in Catalysis' Blue Cap Spray product Lot# P3 MFG Date May 00

Dear Sirs:

As requested, the following is the cost estimate to repeat the screening study conducted by the FDA at their St Louis Laboratory on Blue Cap Spray Product Lot # P3 MFG Date May 00. Please note that this quote is estimated.

 Special HPLC Column (Waters Associates Symmetry C18 75 x 4.6 mm, 3.6 um Purchase of Triamcinolone, Flocinonide, Triamcinolone Hexacetonide and Deoxycorticosterone Pivalate Reference standards. The other reference standards Guidelines Analytical already has in house. Assay of Blue Cap Spray lot using FDA screening method 1 Assay of Blue Cap Spray lot using FDA screening method 2 Coning charge of reviews and properties. 				
5. Coping charge of raw data @0.10/page estimated 100 pages	. 35() 10			
Sub Total	1620			
3% Waste Disposal Fee	21			
Total	C1844			

In order to conduct this testing, GAL will have to purchase approximately \$900 in specialty columns and reference standards unless these materials are provide by the client. GAL will require a deposit of \$900 before the Initiation of this testing, to cover the cost of the specialty items. We estimate that it will take two days to conduct this testing. This testing can be initiated approximately 3-5 days after receipt of all the specialty materials. Since Catalysis is being charged for these specialty items, the materials (column, reference standards, etc.) will only be used to assay Catalysis products.

If you have any questions concerning this testing, please feel free to contact me.

Sincerely,

Michael Ray President.
